### Our Services

**ISO 9001:2008 (Quality Management Systems)** specifies requirements for a Quality Management Systems where an organization needs to demonstrate its ability to consistently provide product that meets customer and applicable statutory and regulatory requirements, and aim to enhance customer satisfaction through the effective application of the system, including processes for continual improvement of the system and the assurance of conformity to customer and applicable statutory and regulatory requirements.

**ISO 14001:2004 (Environmental Management Systems)** specifies requirements for an Environmental Management Systems to enable an organization to develop and implement a policy and objective which take into account legal requirement and other requirements to which the organization subscribes, and information about signification environmental aspects. It applies to those environmental aspect that the organization identifies as those, which it can control, and those, which it can influence. It does not itself state specific environmental performance criteria.

**ISO 27001:2005 (Information Security Management System)** specifies the requirements for establishing, implementing, operating, monitoring, reviewing, maintaining and improving a documented information Security Management System within the context of the organization's overall business risks. It specifies requirements for the implementation of information security controls customized to the needs of individual organization or part thereof.

**ISO 22000:2005 (Food Safety Management Systems)** is a generic Food Safety Management System Standard. It defines a set of general food safety requirements that apply to all organizations in the food chain. Unlike some standards, ISO 22000 does not follow a prescriptive checklist approach. Instead, it allows an organization to develop food safety Management Systems that meets the needs of its suppliers and customers.

**HACCP** stands for Hazard Analysis and Critical Control Points. HACCP is an Industry - wide effort approved by the scientific community as well as regulatory and Industry practitioners. It is a Food Safety methodology that relies on the identification of Critical Control Point (CCP's) in food production and preparation process. Closely monitored CCP's will ensure that food is safe for human consumption.

**OHSAS 18001 (Occupational Health & Safety Analysis System)** is an assessment specification for Occupational Health Safety obligations in an efficient manner, OHSAS 18001 Certification improves that efficiency of the internal operations, thus reduces the chance, accidents and downtime. The safety and quantity of the employees is the prime responsibility of the organization as the future hazards affect their efficiency. OHSAS 18001 assures the compliance with present legal requisites and reduces the risk of various penalties & possible litigation.

**Energy Management Systems (ISO 50001) (EMS)** is a systems of computer aided tools used by operators of electric utility grids to monitor, control, and optimize to performance of the generation and /or transmission systems. The Monitor and control function are know as SCADA; the optimization packages are often referred to as "advance applications"

Energy Management Systems are often commonly used by individual commercial entities to monitor, measure, and control their electrical building loads. Energy Management Systems can be used to centrally control devices like HVAC units and lighting systems across multiple locations, such as retails, grocery and restaurant sites. Energy Management Systems can provide metering, sub metering and monitoring function that allow facility and building manager to gather data and insight that allows them to make more informed decision about energy activities across their sites.
